Summary

Freelance software developer with 5+ years of programming experience and freelance development experience since 2020. Built 30+ client and personal projects across backend systems, REST APIs, web applications, Android, automation, bots, blockchain, and developer tools. Hands-on with Rust, TypeScript, JavaScript, and Python, with experience in databases, Docker and Cloudflare infrastructure, authentication and payments, reverse engineering, and AI. Open-source author of NarrowMind. Seeking a Software Development Engineering internship.

Skills

Languages: Rust, TypeScript, JavaScript, Python, SQL, HTML, CSS, **Backend and APIs:** Node.js, Express.js, Django, Flask, Nginx, REST APIs, JSON, real-time messaging, async programming, **Databases:** PostgreSQL, MySQL, MongoDB, SQLite, Supabase, Redis, schema design, **Cloud and DevOps:** AWS, Azure, Docker, Cloudflare, Linux, CI/CD, self-hosting, reverse proxies, **Mobile:** WebView apps, PWAs, ADB, Reverse Engineering, Accessibility Apps, **Security:** token and session authentication, wallet authentication, rate limiting, reverse engineering, cybersecurity, **Automation:** Puppeteer, Selenium, headless browsers, web scraping, Discord API, Telegram bots, QA, **Web3 and Payments:** Solana (SPL), Phantom wallet, Ethereum tooling, Stripe, **AI and Embedded:** NLP, tokenization, n-gram models, TF-IDF, on-device inference, ESP32, embedded ML, signal processing, **Spoken Languages:** English, Hindi

Experience

Independent Software Developer | Freelance Jan 2020 to Present

- Completed 30+ freelance and client projects spanning web applications, REST APIs, Discord bots, backend services, automation, crypto, NFT, and blockchain applications.
- Built, debugged, tested, and deployed software across backend, mobile, web, automation, payment, wallet, and API integrations.
- Built mobile and backend features for an Italy-based client, including order handling, wallet integration, and payment flows.
- Developed private client systems including an NFT and whale activity tracker with real-time Discord webhook notifications, and multiple configurable Discord bots with a control panel (send, edit, delete).
- Built an Android phone automation system using bare ADB and rooted Android, enabling programmatic phone calls and SMS without a third-party gateway.
- Managed Linux Docker deployments and Cloudflare networking for client projects.

Projects

NarrowMind | Rust, NLP, Information Retrieval

- Built a lightweight statistical language model for question answering and text generation without neural networks, combining n-gram modeling, tokenization, TF-IDF search, sampling, and pattern matching.
- Open-source project with 90+ GitHub stars; ported the core approach to TypeScript as NarrowMind-S2 (40+ stars).

DeCharge | Node.js, Express, Supabase, Leaflet, Solana

- Built a decentralized EV charging application with station mapping, Phantom wallet sign-in, SPL-token payments, on-chain rewards, live charging feeds, a points marketplace, and an admin dashboard.
- Implemented the backend with Node.js and Express and integrated Supabase; completed through the Superteam Earn DeCharge hackathon opportunity.

sysmonitor | Rust, Warp, SQLite, JavaScript, Win32 API

- Built a Windows activity monitor that tracks active applications, detects browsers, extracts current tab URLs, and serves a local REST API and web dashboard from a single binary.
- Used shared in-memory state and SQLite persistence; documented under 1% idle CPU and under 100 MB memory.

Wearable Gesture Recognition | ESP32, Embedded ML, Signal Processing

- Built a wearable gesture-recognition prototype using piezoelectric sensors and a lightweight ML model running on ESP32, as a lower-cost alternative to conventional EMG hardware (roughly 1% of the hardware cost).
- Owned the full pipeline: signal capture, feature extraction, and on-device inference.

Networking and Automation Tools | Reverse Engineering, HTTP, Proxies

- Reverse-engineered application behavior to build a Discord message read detector (10+ GitHub stars).
- Also developed an eBay auction sniper, HTTP/SOCKS proxy checkers, an HTTP tunnel and proxy server, a concurrent process-loop module, and a Cloudflare Turnstile clearance plugin.

Education

University of Allahabad | Bachelor's Degree, Computer Applications Sep 2026 to Aug 2029
National Institute of Electronics and Information Technology | O Level (Remote DCA) Aug 2026 to Sep 2027
TATA DAV Public School, West Bokaro | Senior Secondary, PCM | CBSE May 2026
TATA DAV Public School, West Bokaro | Secondary School | CBSE May 2024

Achievements

- CUET Computer Science: 222/250; All India Rank 88.
- 25+ public GitHub repositories; open-source work including NarrowMind and its TypeScript port.
- Built DeCharge through the Superteam Earn hackathon opportunity using Supabase.
